

Smart, Practical Products for Medical Surge Capacity.

MasCache[®] medical surge care products

help healthcare providers streamline care during emergencies that require expanded treatment capacity. MasCache products are essential, disposable supplies for patients and staff. They are conveniently packaged to help hospitals and emergency teams quickly create temporary treatment areas and deliver disaster care.

Product decisions made simple.

MasCache products were developed using recommendations made by government agencies, independent expert panels, and our own research. This effort helped us identify the type and number of items that need to be stored, the best way to group them based on need and function, and how to package them for quick and easy deployment.

The MasCache line contains prepackaged patient care kits, linen & bedding kits, staff scrubs, and protective clothing. Additional items like privacy curtains, IV poles, disposable stethoscopes and more are also included so that the rapid deployment of temporary patient care areas doesn't become a confusing scramble for randomly located supplies.

Supporting 25 patients for 96 hours of care.

Guidance from hospital accreditation organizations states that planning should focus on at least 96 hours of hospital self-reliance before regional, state, or federal resources are able to support local needs. Both the MasCache PODs and MODs are organized to assist your hospital in meeting these standards of care.

POD

PODs are groupings of MasCache surge care products that are designed to be stationed and dispensed at bedside.

The convenience of PODs

PODs are conveniently grouped and packaged in predetermined quantities to provide supplies for **25 patients for 96 hours of care**. DQE offers three standard PODs – one for adult patients, one for pediatric patients, and one combination POD for both adult and pediatric patients.

Outer Shell Design

The basis of the POD is the “outer shell,” which allows you to mix and match component boxes to ensure proper supplies are arranged by use, location, or preference. The dispenser boxes can be replaced as needed by sliding them in and out of the outer shell.

Organized Treatment Areas

The POD provides the flexibility to organize treatment areas with ease and speed. The outer shell is the typical height of a bedside table, which gives staff much needed functional work and storage space.

From the POD delivery...

Pods are delivered on pallets sealed for years of weather resistant long-term storage.

To the shell...

The POD outer shell keeps stacked boxes stable, allowing for a variety of combinations of supplies and providing functional storage space.

To the dispenser box...

Clearly marked and color-coded dispenser box packaging makes supply identification a breeze.

To the ready to use kit...

The individual kits that fill the dispenser boxes are color coded with bilingual content lists.

The option to buy individually.

All POD contents can be purchased by the box to help you either create your own POD or enhance an existing supply.

MOD

MODs are mobile disposable storage cabinets filled with essential supplies. Each cabinet can be easily rolled and positioned as needed.

The mobility of MODs

Two MOD storage cabinets contain enough supplies for **25 patients for 48 hours of care**. MODs are available in two standard configurations - one for adult patients and one for pediatric patients. Mix or match adult and pediatric MODs to meet your 96 hour requirements.

Long-Term Storage

MODs are delivered on a cardboard base that is sealed for years of weather resistant, long-term storage. Wheels on the bottom of the cabinet allow for fast movement to any desired location.

Mobile Cabinets

Since MOD cabinets are on wheels, they can be moved by one person to strategic locations and can be adapted within any treatment area configuration.

Easy Dispensing

The MOD keeps all supplies in one place for easy access, so healthcare providers can go to a central location for surge care supplies.

Space Conscious

Two MOD disposable storage cabinets are shipped together on one pallet sized base - making it the smallest footprint for patient surge care on the market.

Fast Setup

The MOD is ready to use at a moment's notice. Simply unwrap the weather resistant plastic seal, remove the blocks around the wheels, and it's ready to go.

Mobile Design

The MOD is easily rolled and positioned wherever supplies are required.

Refill your MOD.

MOD supplies are available separately, so you can refill your MOD as needed.

MasCache Contents

- Absorbent Adult Briefs
- Baby Diapers
- Bedding & Linen Kits
- Bedpans
- Biohazard Bags and Dispenser
- Blankets
- Blood Pressure Cuff Covers
- Dry-It™ Disposable Towels
- Nitrile Exam Gloves
- Gown Kits
- Hygiene Kits
- Infant Care Kits
- IV Poles
- Lab Coats
- Male Urinals
- Mylar Blankets
- N95 Respirators
- Patient Lifters
- Pillows
- Post Mortem Kits
- Privacy Screens
- Sani-Bag+® Bedpan & Commode Liners
- Sharps Disposal Container
- Staff Scrubs
- StatPaq™ Standard Precautions Kits
- Stethoscopes

Contents may vary between Adult & Pediatric POD & MOD configurations.

The **RIGHT** products, for the **RIGHT** reasons.

The MasCache kits that fill the dispenser boxes in both the POD and MOD are selected, assembled, and packaged based on the following criteria:

Value

Disposable items that are as similar as possible to the supplies healthcare providers depend on to provide routine patient care.

Functionality

Items selected are essential for patient care and readily adaptable to any treatment environment.

Disposability

Being disposable eliminates the need for laundering and reduces the potential spread of disease to untrained staff.

Longevity

All packaging is engineered for ease of storage, rapid deployment, and extended shelf life.

We have your surge care products covered...

Long-Term Storage Packaging

PODs and MODs are packaged in multi-layer, weather-resistant wrapping that protects sensitive items from moisture, sunlight, ozone, and impact. They are clearly marked with detailed content lists, delivery dates, and storage recommendations. Products included in both PODs and MODs have no expiration date and have demonstrated shelf life stability.
